TITLE	Georgia Statewide Testing Program Results 1972-73: 4th Grade Schools Category Report.
INSTITUTION	Georgia State Dept. of Education, Atlanta. Div. of Program and Staff Development.
PUB DATE	May 73
NOTE	86p.
EDRS PRICE	MF-$0.65 HC-$3.29
DESCRIPTORS	*Achievement Tests; Comparative Analysis; *Grade 4; Performance Factors; Program Evaluation; Public Schools; Standardized Tests; *State Programs; Statistical Data; *Test Results
IDENTIFIERS	*Georgia

ABSTRACT

This report, one of six volumes presenting the results of Georgia's statewide testing program, provides test results for the fourth grade by school category and, within categories, by school. The categories, totaling 48 for individual schools and 48 for systems, were devised in an effort to make comparisons between schools and systems more meaningful. Each category is defined by three factors which have been shown to influence achievement test scores: (1) system or school size--average daily attendance; (2) mental abilities scores of students--Cognitive Abilities Test verbal scores; and (3) income level--the percent of students above a minimal income subsistence level. No in-depth analysis of results is given in this report, which should be read in conjunction with the other reports. The following information is provided: average daily attendance, scores for the Cognitive Abilities Test, scores for the Iowa Tests of Basic Skills, mean, number of students tested, percentile rank, percentage above the minimal subsistence income level, and standard deviation. (For related documents, see TM 003 007-009.) (KM)

INTRODUCTION

When the State Legislature funded the Statewide Testing Program in 1971, Georgia took its first step toward a comprehensive educational assessment program. The tests presently being administered, however, are directly concerned with certain basic skills and abilities, and are not intended to measure total achievement in any given subject or grade. While most of these skills and abilities appear basic or essential to nearly all types of academic achievement, it is obvious that they are not inclusive of all of the desired outcomes of instruction at the levels tested. The results obtained from these tests, therefore, will not constitute in themselves an adequate basis for, and should not be unduly emphasized in, the total evaluation of instruction. It is conceivable, although very unlikely, that some schools or classes may do well on these tests and yet be relatively deficient in relation to other important responsibilities – as in music, literature, health or character education – and that other schools or classes obtaining below-average test results may, nevertheless, be providing an educational environment that in other respects is quite satisfactory.

These tests are concerned with only those outcomes of instruction that happen to be particularly amenable to objective measurement. The measures provided can be used to distinct advantage, but their wisest use involves a full recognition of their restrictions. One should measure and treat as objectively as possible those aspects of instruction that are susceptible to such treatment. In the meantime, one should not neglect the other less tangible but perhaps equally important aspects.

To draw conclusions from a single measurement or test result is extremely difficult and can be misleading. There are often many factors which must be considered in analyzing test scores. It was for this reason that the original advisory committee for the Statewide Testing Program stated that "test results cannot be used as a basis of comparison of teachers, schools, or systems." However, the decision by the Attorney General's office that failure to release group data of the Statewide Testing Program violated the State Open Records Law mandated that the State Board of Education make public these test scores for individual schools and school systems. Consequently, the State Board of Education, in compliance with State law, in May of 1972 released an alphabetical listing of systems and schools within systems with obtained scores for each major subtest at each grade level tested. Report 1 of the 1973 reports contains the same alphabetical listing of school systems and schools within systems.

Realistically speaking, the results of the Statewide Testing Program were used (and no doubt will continue to be used) to compare schools and systems as to the quality of their instructional programs. Ma
the media, the general public and some educ

be used) to compare schools and systems as to

the quality of their instructional programs. Many of the conclusions drawn by the media, the general public and some educators concerning the quality of Georgia schools were either misleading or erroneous because they failed to consider factors influencing achievement test scores (such as socioeconomic status and abilities) in making their judgments.

Bearing this fact in mind, it is the purpose of this report to make such comparisons more meaningful and valid by holding constant a number of quantifiable factors which research indicates influence achievement test scores.

The factors which are held constant are –

a) The Average Daily Attendance (ADA).
b) The Cognitive Abilities Test (CAT) verbal scores.
c) The percent of ADA students in a school above a minimal income subsistence level (MSL).

By holding these three factors constant, i.e., size of school, mental ability and income level, it should be possible to categorize (see Figure 1) each school and system in such a manner that it can be determined which schools or systems are similar enough for meaningful comparisons. This technique should help raise many questions regarding reasons for a school falling in a particular category, why and/or how it differs from those in the same or different categories.

There are 48 categories for systems, as well as 48 categories for schools at each grade level tested (four, eight and eleven). Each category is defined by system or school size, mental abilities scores of students and income level (see Figure 1). Thus, Category 1 for systems includes those systems with an ADA over 9,000, CAT verbal scores over 100, and between 81 percent to 99 percent of students above a minimal subsistence income level. Category 48 includes those systems with an ADA below 2,000, CAT verbal scores below 84, and only 41 percent or fewer students above a minimal subsistence income level.

It should be obvious that inter-category comparisons cannot be meaningfully made, i.e., Category 1 systems cannot be compared with Category 48 systems. Thus it is inappropriate to assume that Category 1 systems are doing a superior job to Category 48 systems. It might very well be that some Category 48 systems are doing as well as or better than some Category 1 systems considering factors over which the school system has little or no control, i.e., students' academic ability and family income level.

While comparisons cannot be made across categories, it should be possible to compare schools or systems within a given category. For example, since the systems in Category 1 are all large systems with students who are high in aca-

demic abilities and family income, it is reasonable to expect their achievement test scores to also be quite similar. When wide discrepancies exist within a category, we should then begin to examine the school input factors (such as average teachers' salaries, instructional cost per pupil, etc.), as well as other factors, in attempting to determine why some schools or systems that are similar in some ways score differently in achievement level.

It should also be possible to make some assumptions when comparing a system in relationship to its category. For example, assume that system X has achievement test scores that fall at the State Norm (average). If system X is found in Category 48 where both students' abilities and family incomes are low it can probably be assumed that system X is doing an above average job of instructing its students. If system X had fallen into Category 1 where both students' abilities and family incomes are high, it is reasonable to assume that its students would be functioning in the superior range. Since, however, these students on the average are only obtaining scores at the State Norm, the system may well be functioning at a level which is below average. Bear in mind that inter-category comparisons have not been made here; it is the syst
category which has been examined.

It should also be remembered that the scores reported in
four are mean composite scores. The mean score represe
a school or system. Consequently, any school or system
dual students who score as high as or as low as some stud
or system. In other words, while Elementary School X m
site score of 69, some students in School X may score as
may score as low as 45.

This report is one of six volumes in which the Statewide
are found. This particular report contains categories for
present any in-depth analyzation of the results; nor shoul
be drawn from this report alone. It should be read in cor
reports, with particular emphasis given to Report six. T

nto Category 1 where both students' abilities
easonable to assume that its students would
nge. Since, however, these students on the
t the State Norm, the system may well be
ow average. Bear in mind that inter-category comparisons have not been made here; it is the system's relationship to its category which has been examined.

It should also be remembered that the scores reported in Reports two, three and four are mean composite scores. The mean score represents the average score for a school or system. Consequently, any school or system would likely have individual students who score as high as or as low as some students in any other school or system. In other words, while Elementary School X may have a mean composite score of 69, some students in School X may score as high as 83 while others may score as low as 45.

This report is one of six volumes in which the Statewide Testing Program results are found. This particular report contains categories for grade four. It does not present any in-depth analyzation of the results; nor should too many conclusions be drawn from this report alone. It should be read in conjunction with the other reports, with particular emphasis given to Report six. That report will be concerned primarily with the analyzation of the Statewide Testing Program results.

FOURTH GRADE GLOSSARY OF TERMS

The following are definitions of the terms and the types of results that will be found in this report.

1. *Average Daily Attendance (ADA).* - The Average Daily Attendance indicates the average number of students who daily attend a school or system. The average daily attendance of a school grade is presumed for the purposes of this report to be the number of students who participate in the Statewide Testing Program.

   The number of students daily attending a school or system is an indicator of its size.

2. *Cognitive Abilities Test (CAT).* - The Cognitive Abilities Test provides a set of measures of the individual's ability to use and manipulate abstract and symbolic relationships (i.e., symbols representing words, and symbols representing spatial, geometric or figural patterns). Verbal and non-verbal abilities of the students are reported as Standard Age Scores (SAS). An average SAS will fall above and below a score of 100, i.e., approximately 84 to 116. CAT verbal scores theoretically provide a more meaningful measure of the individual's academic ability. This is because academic skills and tasks rely heavily upon the individual's verbal abilities. It was for this reason the CAT verbal scores were used as one variable in the Descriptive Categories Matrix.

3. *Iowa Tests of Basic Skills (ITBS).* - The Iowa Tests of Basic Skills are concerned with the basic skills essential to success in any type of schoolwork at the elementary and junior high school level (Grades four and eight). Major areas tested are –

Test V - Vocabulary
Test R - Reading Comprehension
Test L - Language Skills (Spelling, Capitalization, Punctuation, Usage)
Test W - Work-Study Skills (Map Reading, Reading Graphs and Tables, Knowledge and Use of Reference Materials)
Test M - Mathematics Skills (Mathematic Concepts, Mathematic Problem Solving).

In the test situation the pupil is required to use his skills just as he does in his regular schoolwork. The results are an estimate of where the pupil is along a developmental continuum, not of where he should be placed in the graded organization of the school. The results are reported in standard score form. An average fourth grader would be expected to receive a score between 68 to 71 and an average eighth grader would be expected to rece 102. For the purposes of this report a composite sco subtest scores.

4. *Mean.* - Each category is defined by its mean or aver This is computed by adding the scores of each stu particular category and dividing this sum by the to that category.

5. *N.* - In each category for the fourth grade the numbers which fall under this heading correspond grade students who were tested.

6. *Percentile Rank (Labeled 75 percent, 50 percent, 25* is defined by the percentile ranks of its achievemer percentile ranks can be thought of as cut off point example, a score of 77.7 in the composite ITBS as grade) is the cut off point for the 75th percentile ra category all schools which obtained a composite IT were in the top 25 percent of that category. Si schools obtaining a score of 71.2 or better were Category 1 and all schools receiving a score at o bottom 25 percent of Category 1. Keep in mind tha are being utilized here, and one would expect to fin fall around the 50th percentile point. This is because represents the average or midpoint score of the cate

7. *Percentage of ADA Students Above the Minimal S* This data is collected from the State Free Lunch P dividing the number of ADA students not receiv lunches by the number of ADA students in the sc for free or reduced price lunches is determined b number of children in the family. At the present accurate index of the socioeconomic status of a available. It is important to note that not only is t as a determining factor but also the size of the fam accurate indicator of the economic status of the reason to believe that the data will not be represen tested.

8. *Standard Deviation or S. D.* - Each category is deviation from the mean (average) achievement sco can be thought of as a measure of dispersion or v used to compute the mean (average). The larger spread of scores around the average.

pected to receive a score between 68 to 71 and

an average eighth grader would be expected to receive a score between 99 to 102. For the purposes of this report a composite score was computed from the subtest scores.

4. *Mean.* - Each category is defined by its mean or average composite ITBS score. This is computed by adding the scores of each student in all the schools in a particular category and dividing this sum by the total number of students in that category.

5. *N.* - In each category for the fourth grade there is a heading "N". The numbers which fall under this heading correspond to the number of fourth grade students who were tested.

6. *Percentile Rank (Labeled 75 percent, 50 percent, 25 percent).* - Each category is defined by the percentile ranks of its achievement scores. In this report the percentile ranks can be thought of as cut off points for obtained scores. For example, a score of 77.7 in the composite ITBS as seen in Category 1 (fourth grade) is the cut off point for the 75th percentile rank. This means that in this category all schools which obtained a composite ITBS score at or above 77.7 were in the top 25 percent of that category. Similarly, in Category 1 all schools obtaining a score of 71.2 or better were in the top 50 percent of Category 1 and all schools receiving a score at or below 67.5 were in the bottom 25 percent of Category 1. Keep in mind that category percentile ranks are being utilized here, and one would expect to find that most of the schools fall around the 50th percentile point. This is because the 50th percentile point represents the average or midpoint score of the category.

7. *Percentage of ADA Students Above the Minimal Subsistence Income Level* - This data is collected from the State Free Lunch Program. It is computed by dividing the number of ADA students not receiving free or reduced price lunches by the number of ADA students in the school or system. Eligibility for free or reduced price lunches is determined by family income and the number of children in the family. At the present time this data is the most accurate index of the socioeconomic status of a school or system that is available. It is important to note that not only is the income of families used as a determining factor but also the size of the family. Thus we have a more accurate indicator of the economic status of the family unit. There is little reason to believe that the data will not be representative of the groups being tested.

8. *Standard Deviation or S. D.* - Each category is defined by its standard deviation from the mean (average) achievement score. The standard deviation can be thought of as a measure of dispersion or variability of all the scores used to compute the mean (average). The larger the S. D. the greater the spread of scores around the average.
